REVISED AND ANNOTATED CHECKLIST OF THE LEPIDOPTERA OF TURKEY

by

Ahmet Ömer Koçak¹ Muhabbet Kemal²

Abstract: Revised and Annotated Checklist of the Lepidoptera of Turkey. *Cent. Ent. Stud., Priamus Suppl.* 8: 1-150, 2 Tables.

This study deals with the Lepidoptera species hitherto recorded in Turkey. Totally 6555 valid species group taxa are enumerated. Among them, 5101 species and 1454 subspecies are listed alphabetically under the related families. Provincial distributions in Turkey are revised and given as codes. Larval foodplants are added to the 1648 species. Some remarks on the nomenclature of the taxa are mentioned in footnotes. Additional references to the Lepidoptera of Turkey, published especially in the recent years, are given. *Chersotis margaritacea* ssp. *cesa* (nomen novum) is proposed as valid name for *signata* Wagner, 1932 (nec Staudinger, 1900).

Keywords: Checklist, nomenclature, Lepidoptera, Turkey.

Introduction

Within the frame of the database of the Old World Lepidoptera³, the authors have been preparing the checklists of various states, regions and territories, where the Lepidoptera species and subspecies recorded. In this program of the Cesa 90703 classified Lepidopteran taxa have been checked so far (nearly 1/3 of the World). Among them, number of the recorded valid taxa names are as follows; generic names 8172, specific names, 59516, subspecific names 22080, and valid family group names, 934. Besides, their synonyms, and worldwide distribution information are also gathered by the authors, by using the special codes, indicating currently 5611 localities of the Lepidoptera in the World. These codes are freely accessible in the following internet address:

<http://www.members.tripod.com/Cesa88/Code.pdf>

In the present paper, the Lepidoptera species recorded in Turkey so far, are listed alphabetically within their families. Totally 5101 species, belonging 76 families together with their 1454 representative subspecies are listed below. In the previous checklist, the species of the butterflies were arranged under the Part I. In that part, totally 387 species were listed under 9 families. Now this number increased to 392. Similarly, the species of the moths were arranged under the Part II. In that part, totally 4642 species of the moths, belonging to 67 families, were listed alphabetically. In the present catalogue, number of the species of the moths in Turkey increased to 4709.

Table 1 – Number of the recorded Lepidopteran species of some states in Europe and Asia. This information is temporary and based on the continuing researches of the Cesa. For more information, please visit our Web Page, Information from Databank of the Cesa: <http://www.members.tripod.com/entcesa/Howmany.htm>

State	Number of species	State	Number of species
France	4871	Turkey	5101
Spain	4411	Lebanon	1183
Italy	4697	Iraq	1185
Austria	3963	Iran	3320
Great Britain	2414	Afghanistan	1614
Germany	3545	India	5820
Russia	5538	Thailand	4437

In the Table 1, number of the Lepidopteran species of 14 European and Asian states are given. The numbers mentioned are temporary, however, the richness on the Lepidoptera fauna of Turkey is visible, when comparing with the well studied European states, as well as its neighbours in the Middle East. Potentially, it is expected that this number for Turkey should not be less than 6500.

Comparing with the previous checklist, in the present study, especially information on the provincial distributions are revised. However, there are still many species mentioned here, without provincial information. The case is inevitable for today, as they were usually mentioned in the publications only as “Turkey”.

In the present study, each species and subspecies are given with valid scientific names, authors and date of publications. Totally 6555 species and subspecies are listed alphabetically under the related families. In the list, family names are cited between () on the right side of the scientific name of the taxa. Synonymous scientific names are omitted here, due to the page capacity. Information on the synonymy in the recent checklist is still available. Vernacular names have been revising for a separate publication by the

³ Diversity of the Lepidoptera in the World (DLW), Lepidoptera of Turkey (LTR) <http://www.cesa-tr.org/Cesaprojects.htm>

authors; therefore, they have been omitted here. National codes of Turkish provinces are mentioned. Larval foodplants of totally 1648 species are arranged here for the first time.

Bibliography of the Lepidoptera are still under preparation as separate file of the Cesa Databank. However, a complementary list of the publications used during last year of the preparation of this checklist are given at the end of this study.

Some Explanations on the Scientific Name Combinations Used in this Study

I. Example: Archon apollinus (Herbst,1798)

Archon	apollinus	Herbst,1798
genus name	species name	author and date of publication

II.Example: Papilio (s.str.) machaon Linnaeus,1758

Papilio	s.str.	machaon	Linnaeus,1758
genus name	nominate subgenus name, sensu stricto	species name	author and date of publication

III. Example: Papilio (s.str. (Alexanoria)) alexanor Esper,[1800]

Papilio	s.str.	Alexanoria	alexanor	Esper,[1800]
genus name	nominate subgenus name	section name	species name	author and corrected date of publication

IV. Example: Polyommatus (s.str. (Agrodiaetus (Admetusia))) admetus (Esper,[1783])

Polyommatus	s.str.	Agrodiaetus	Admetusia	admetus	Esper,[1783]
genus name	nominate subgenus name	section name	subsection name	species name	author and corrected date of publication

The provincial distributions of the Lepidoptera in Turkey are still little known. The numerical information among the best known seven provinces are given below (Table 2):

Table 2 – Numerical information on some provinces of Turkey (based upon the Databank of the Cesa)

Provinces	number of species
Amasya (05)	1412
Kahramanmaraş (46)	1389
Ankara (06)	1381
Bursa (16)	1292
Konya (42)	1230
Van (65)	0972
Erzurum (25)	0780

Faunal researches in Turkey, organised by the authors, are still continuing.
